IBM i2 Enterprise Insight Analysis

Organizations and intelligence agencies from a variety of industries and sectors face the same challenges when it comes to big data – the need to uncover actionable insights, with limited resources, with critical speed. But with the right intelligence solution, overwhelming data won't be a challenge, rather, it becomes your resource to smarter, more effective decision making.

IBM® i2® Enterprise Insight Analysis is a truly interoperable and scalable solution that enables organizations to perform analysis and advanced analytics at scale and with critical speed, so they can turn massive amounts of data into actionable insight in near real time to support timely decision-making. Featuring out of box capabilities, this cost effective solution was designed to enable organizations to be self sufficient and to support the dynamic analysis process, even as challenges and missions evolve.

A High Performance Printing Solution for Your Agency

With three distinct models, Lexmark MS310/MS410 Series printers offer superior performance, security, usability and value for public sector organizations. This series offers value and performance typical of higher-priced printers. Even the lowest-priced model features duplex printing, instant warm-up fuser, display panel, Ethernet, USB and parallel ports, plus options for wireless printing and higher input capacity. Additional models offer color LCD display, Confidential Print, support for Extra High-Yield cartridges and recommended monthly page volume up to 7,200 pages. And they're compact enough to fit anywhere. Download this whitepaper to learn

A New Generation of Stackable Smart Switches for the Public Sector

NETGEAR, Inc., a global networking company that delivers innovative products to government, businesses, consumers and service providers, has extended its industry leadership with a new family of 10 Gigabit Ethernet Smart Switches, the ProSAFE® S3300 Gigabit Stackable Smart Switch Series (www.netgear.com/s3300). The ProSAFE S3300 Series provides a blueprint for a dependable network that can easily expand as needed, exploiting the full power of 10G-capable servers and network storage devices. From greenfield environments to network refreshes for customers who value ease of deployment and management, the ProSAFE S3300 series sets new standards in defining flexibility and choice for small and medium-sized businesses (SMBs), government agencies, educational facilities, and other organizations looking to leverage reliable technologies at affordable price points. Cities Turn to 'Smart' Initiatives to Remain Vibrant

An i360Gov Special Report.

State and municipal governments are examining how to leverage low-cost tools, technologies and services to help optimize internal facilities and asset management and keep pace with evolving constituent needs. Smart initiatives typically run on high-performance networks, using sensors, computers and other physical devices. The National Institute of Standards and Technology (NIST) reports the Internet of Things (IoT) currently accounts for more than \$32 trillion in global economic activity, and is projected to grow as more tools are leveraged for new uses in health care, emergency services, transportation and other key city operations. Learn what it takes to "Get Smart," along with the latest information about current smart city initiatives, as well as best practice advice from leading industry experts in this i360Gov special report.

A Roadmap for E-Discovery Compliance

An i360Gov Special Report.

Without the right combination of tools and defensible, repeatable, internal processes in place, agencies tend to 'overcollect' information for e-discovery, and can end up incurring judicial sanctions, along with ballooning costs. By establishing scalable and agency-wide e-discovery processes, it's possible to lower costs, and improve regulatory compliance. Read this important i360Gov special report to learn more what it takes to efficiently handle information requests and avoid sanctions, fines, or any undermining of public confidence.

Cloud without Compromise for the US Federal Government

Cloud solutions from SoftLayer, an IBM company, are designed to meet the demanding needs of federal agencies. These capabilities start with SoftLayer data centers in Texas (open now) and Virginia (opening Fall 2014). Each center is designed and built to comply with demanding federal standards, and each device in each center — from servers to power supplies — is connected to a single integrated management system. This design enables automated deployment and control of the entire platform, including both bare metal and virtual components, and extends that control to you through one web portal and API for on-demand scalability and management. The highly secure SoftLayer data centers will initially have capacity for 30,000 servers and a robust private network infrastructure designed to support 2,000 gigabytes per second of connectivity between them. "

Auditing Your Data for Insider Threats

Data generated by applications and servers, inside or outside a department or agency, can play a significant role in determining anomalous employee behaviors. In some cases, the motivational context for those behaviors can signify an insider threat. Knowing the difference between willful acts and innocent mistakes requires understanding when user activity is abnormal in the broader context of employee behavior.

Discovery and Usage data for Software License Management (SLM)

Is Microsoft SCCM the best solution? Many organizations use Microsoft's SCCM product as their primary software discovery method. Because SCCM is already used by operations, it comes at little or no additional cost to the SLM group. But is it a wise decision for software licensing to use SCCM data as the primary data source? We suggest that this decision should be reconsidered because of the extra costs and missed savings opportunities that come with using SCCM for discovery and usage.

How to Make Apps Run More Efficiently in the Age of the Cloud

As enterprises have embraced IT trends like cloud computing and virtualization, their operational needs have evolved to make application performance more important than ever before. But operating applications at peak performance is challenging in the cloud. That's why many enterprise IT departments now have Applications Operations groups tasked with ensuring that applications run efficiently across these complex IT stacks. But, most tools designed to address these application performance management (APM) issues were never designed for this dynamic environment. To achieve smooth delivery of applications at all times, Applications Operations groups need APM solutions that can give them insight and analytics to manage their apps. This SlashGuide gives IT managers a scorecard to identify APM solutions that will deliver more efficient application performance.

Special Report: Anything as a Service

An i360Gov Special Report.

Government agencies are under pressure to keep costs under tight control while at the same time providing a high level of services to citizens and businesses. It's a tall order for sure, but not impossible thanks to a host of "anything-as-a-service" offerings enabled by the cloud and virtualization technology.

In fact, cloud-based services for everything from applications to storage systems to entire IT infrastructures are enabling agencies to build unprecedented efficiencies into their technology environments.

By acquiring IT components such as server capacity and enterprise applications through services offered via the cloud rather than traditional on-site servers, public sector organizations can become much more agile in how they deliver services and at the same time reduce capital and operating expenses.

Read i360Gov's new special report on "Anything as a Service" to learn more.

Leaning In: Government's Push to Leverage Big Data

An i360Gov Special Report.

In 2014, government agencies are overcoming challenges inherent in managing high volume, high velocity data streams, to capture, store, manage and analyze big data as it flows through agencies every day. In this special report you will learn about what federal oversight organizations are doing to motivate agencies to gain more from big data. At the same time, one the world's largest judicial systems, the Social Security Administration's Office of Disability Adjudication and Review (ODAR), is leveraging large data sets to gain more intelligence about each of approximately 100,000 disability claims appealed each year. Insights from SSA's ODAR data have uncovered policy errors and provided valuable feedback, which has been used to reduce errors and improve training, along with operational decision-making. Read more about this SSA big data analytics effort in this i360Gov report.

Improving mission effectiveness with social media analytics

Enhance situational awareness, improve decision-making

Today, federal agencies face significant challenges in increasing their operational effectiveness while reducing costs. The explosive growth of social media creates both greater challenges and significant opportunities for federal agencies and service branches. The sheer volume of information produced in social media both within and outside of agencies often prevents these agencies from using the "big data" generated by social media and obscures the valuable insights that social media analysis can bring.

[DOWNLOAD NOW »](#)

However, harnessing the valuable insights that can be derived from social media can provide agencies with a double benefit. Social media analytics can give agencies a low-cost way of both improving mission delivery and reducing mission costs. Read this paper to learn more.

A Federal Open Data Status Report

An i360Gov Special Report.

By November, federal agencies must comply with a Presidential Executive Order mandating that more data be made open and machine readable. Most agencies today are only getting started. What they must understand is that every agency has an external mission. Whether they inform a specific party, the public, industry or other third party groups, every agency provides services to, or interacts with others. And in each agency, there are data sets that should be made open and accessible. That's the crux of the argument for agency Application Programming Interfaces (APIs). Read this special report to learn what federal agencies can do NOW to get rolling on achieving compliance with Open Data Directives.

A Fresh take on Mobile Printing Security

Mobile devices, such as smartphones, tablets, and laptops, afford employees the flexibility to be productive at home, at work, and on the go. Yet as an IT administrator, you likely have many concerns around the security risks inherent to these devices. They are easily lost or stolen—and with them any of the corporate information to which they may grant access. With the variety of ever-changing mobile platforms and operating systems, how can you know whether a given mobile device is able to securely access the network?

[DOWNLOAD NOW »](#)

Business users want printing to be simple and quick, whether they are printing from their home office or on the go. You, on the other hand, struggle to keep the network secure, maintain control over sensitive corporate information, and manage printing costs.

Read this complimentary whitepaper to learn about hardware, solutions, and services that meet users' needs for mobile printing without sacrificing security.
